

Transform many files at once

Thursday, August 27, 2020
9:52 AM

Add the folder you want to transform to your project

1. Right-click on the project in the Project pane and then click on **Add Folder..**

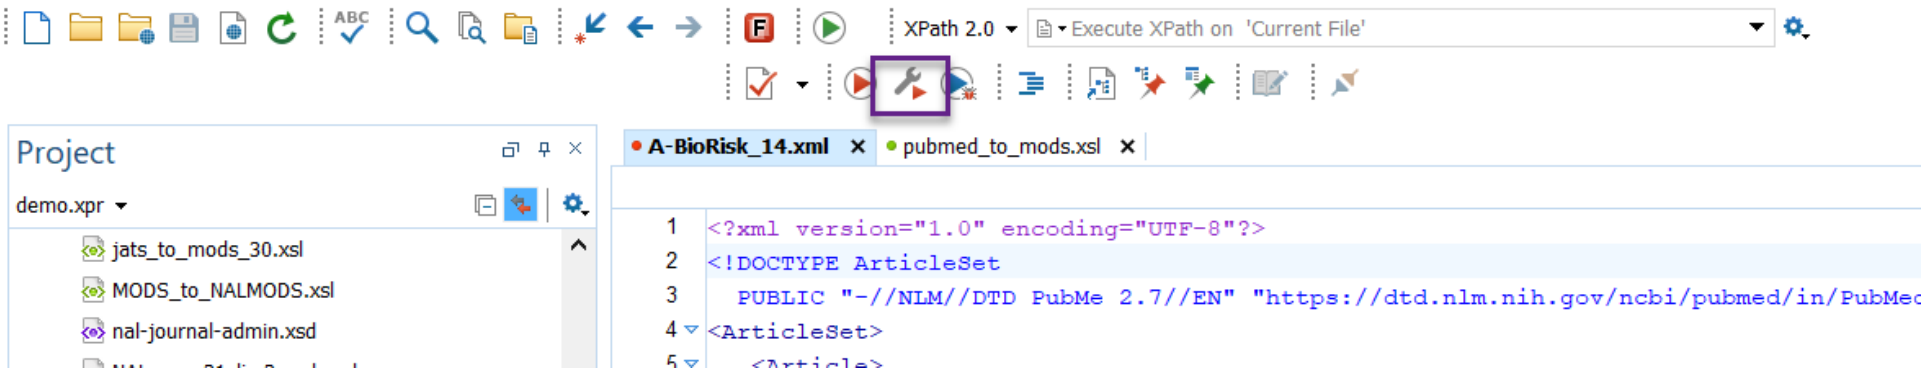

2. Navigate to the folder with the metadata you'll be converting and click **Choose**

Make sure the transformation is saved as a Transformation Scenario

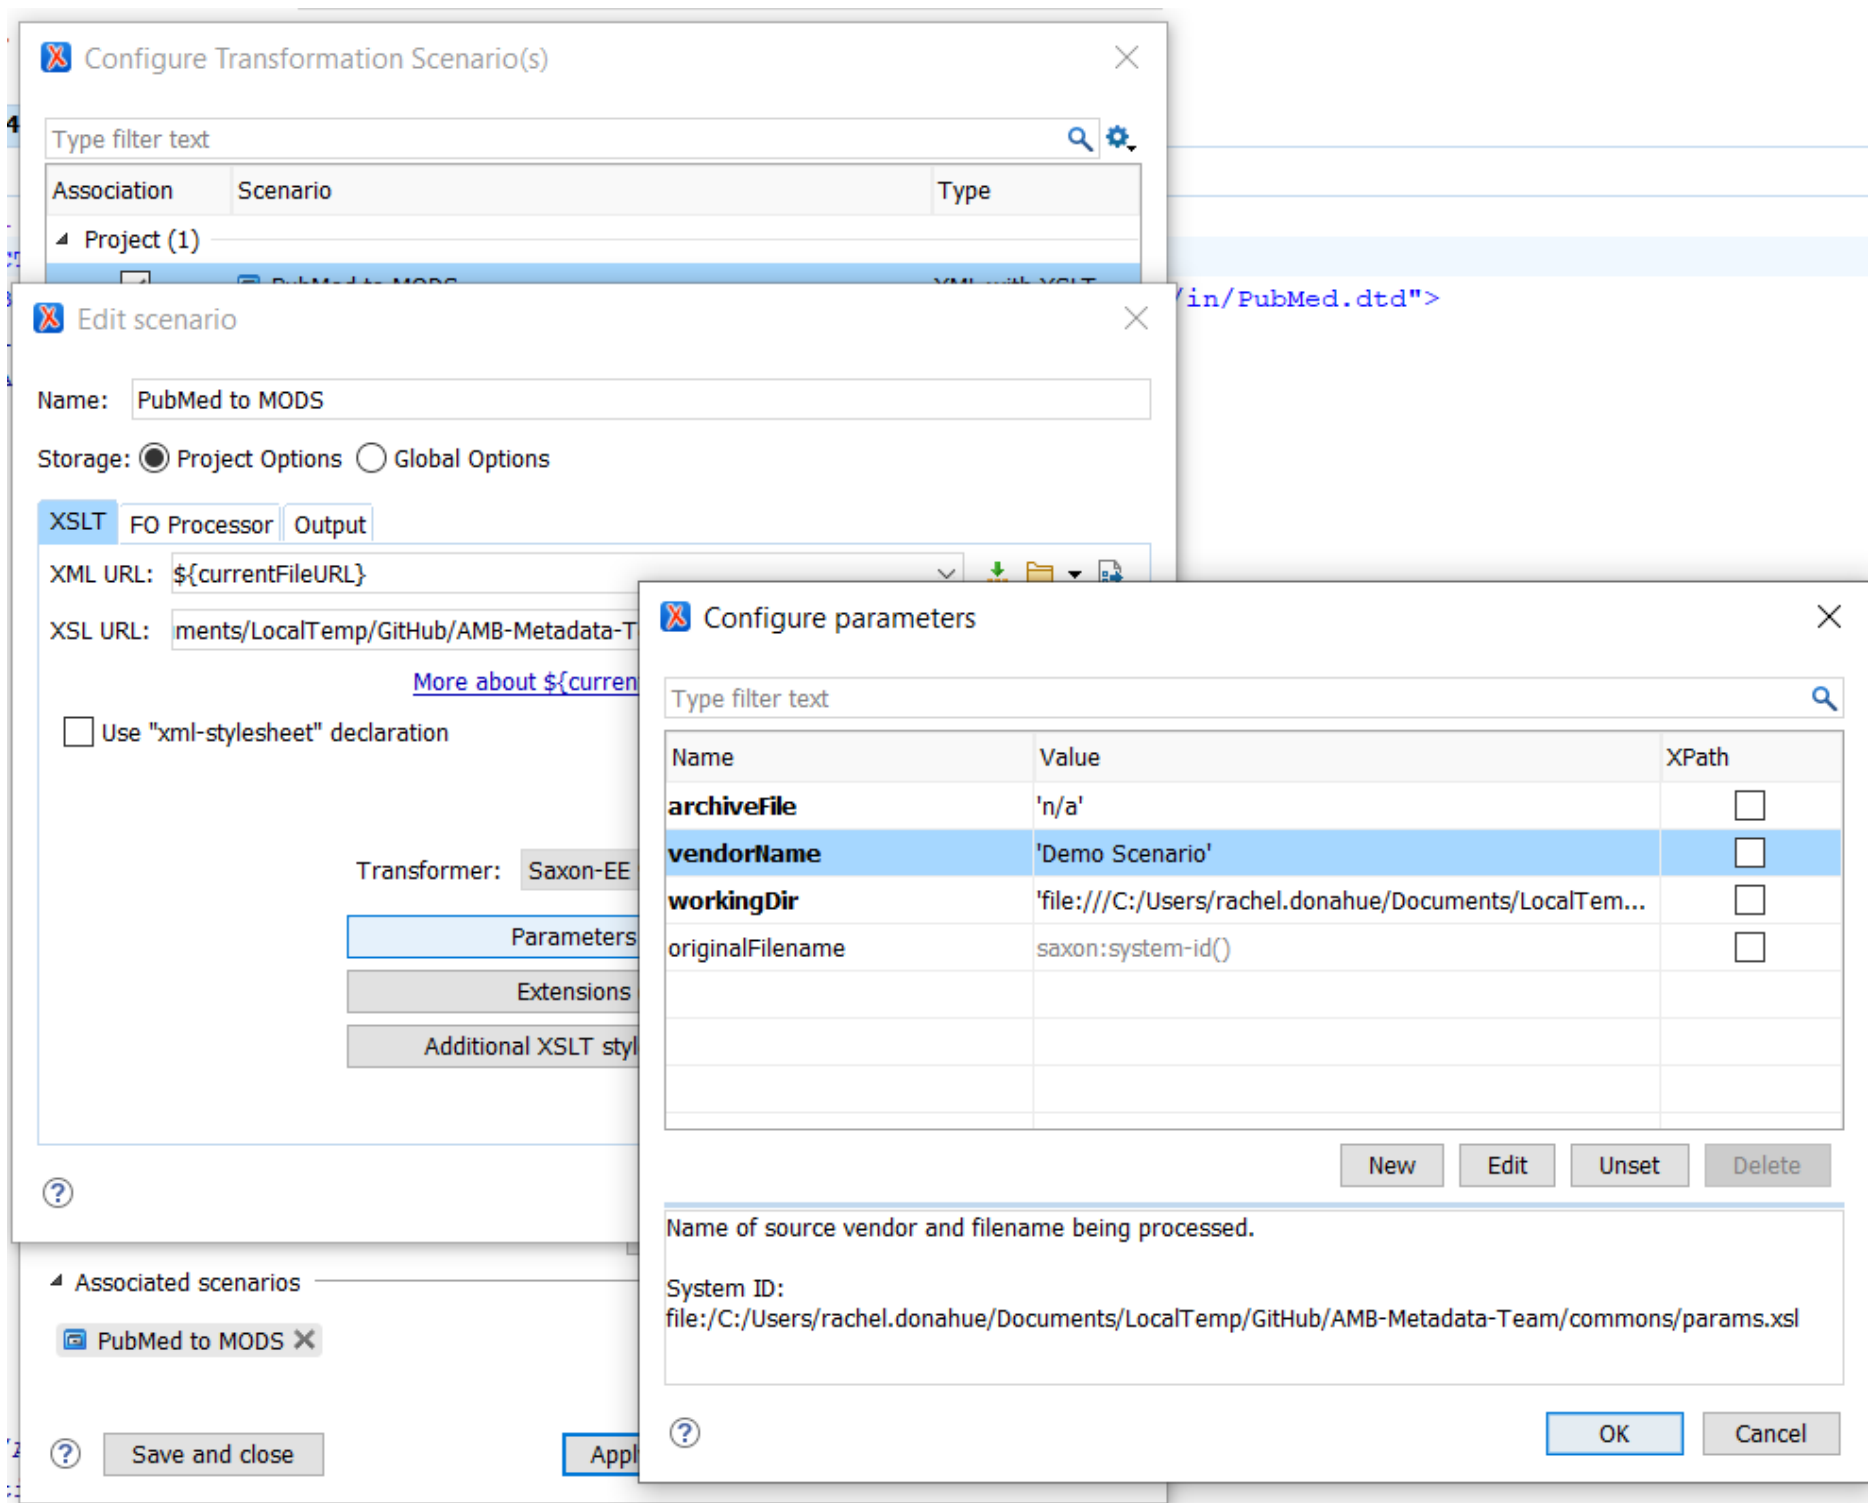

1. I'm using PubMed here, so I'll open one of the files and the pubmed_to_mods stylesheet.
2. With the XML file open, click the Transformation scenarios button

A-BioRisk_14.xml [C:\Users\rachel.donahue\Documents\LocalTemp\Metadata\test\PubMed\one-each\A-BioRisk_14.xml] - <oXygen/> XML Editor

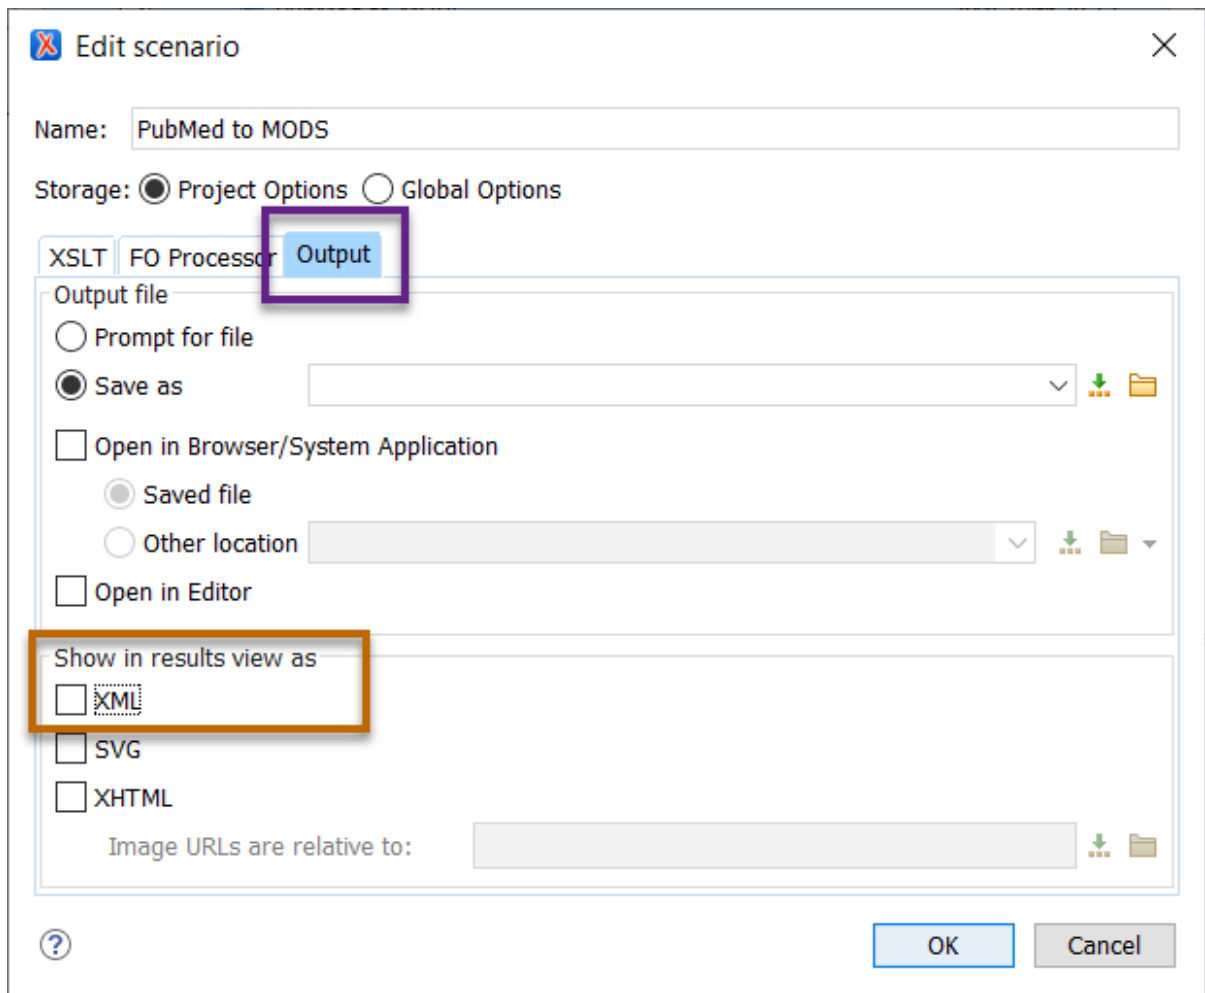

File Edit Find Project Options Tools Document Window Help

3. Select Saxon EE and fill in the parameters as usual.

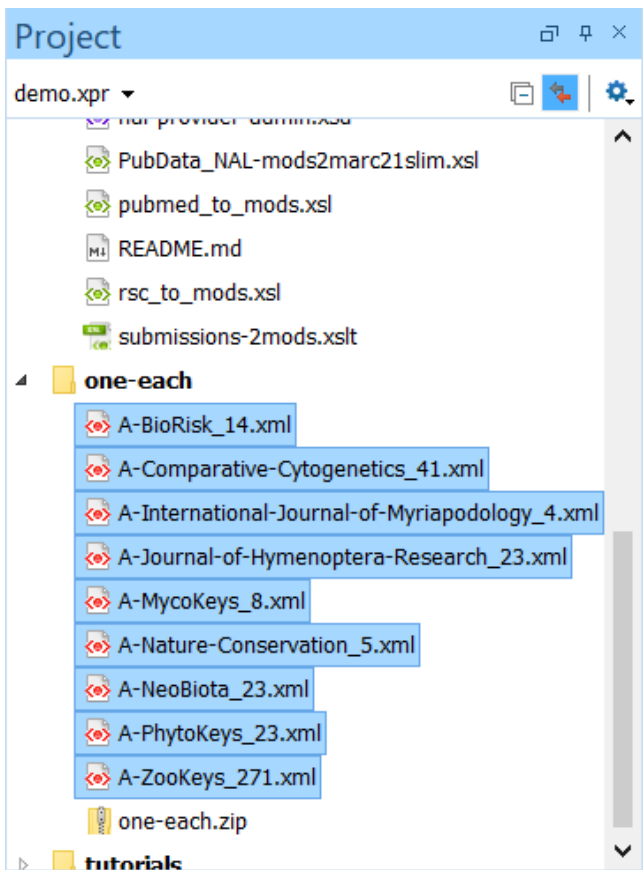

4. Go to the **Output** tab and deselect **Show in results view as.. XML** to avoid having a bunch of results windows open

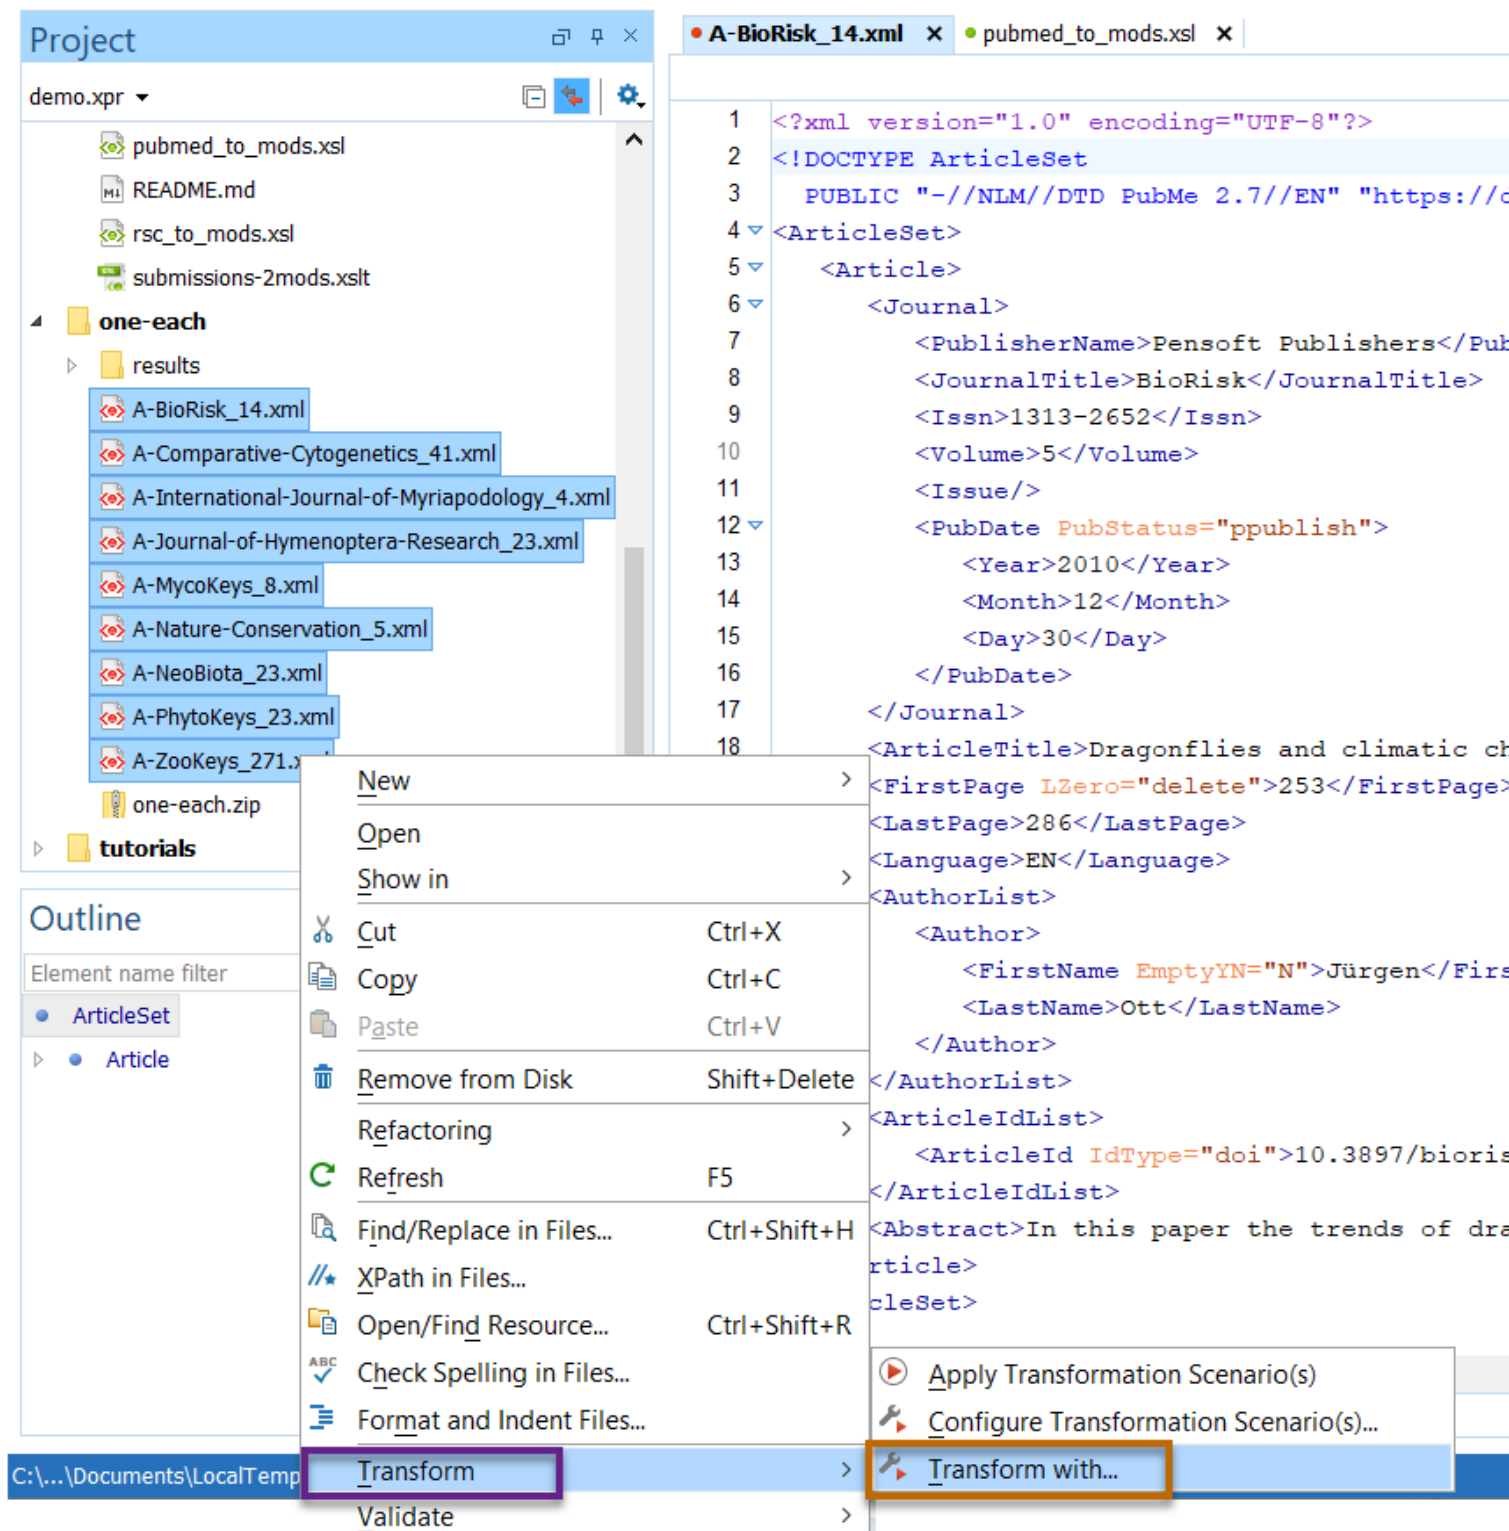

5. Click **OK** and then **Save and close**

Batch transform the files

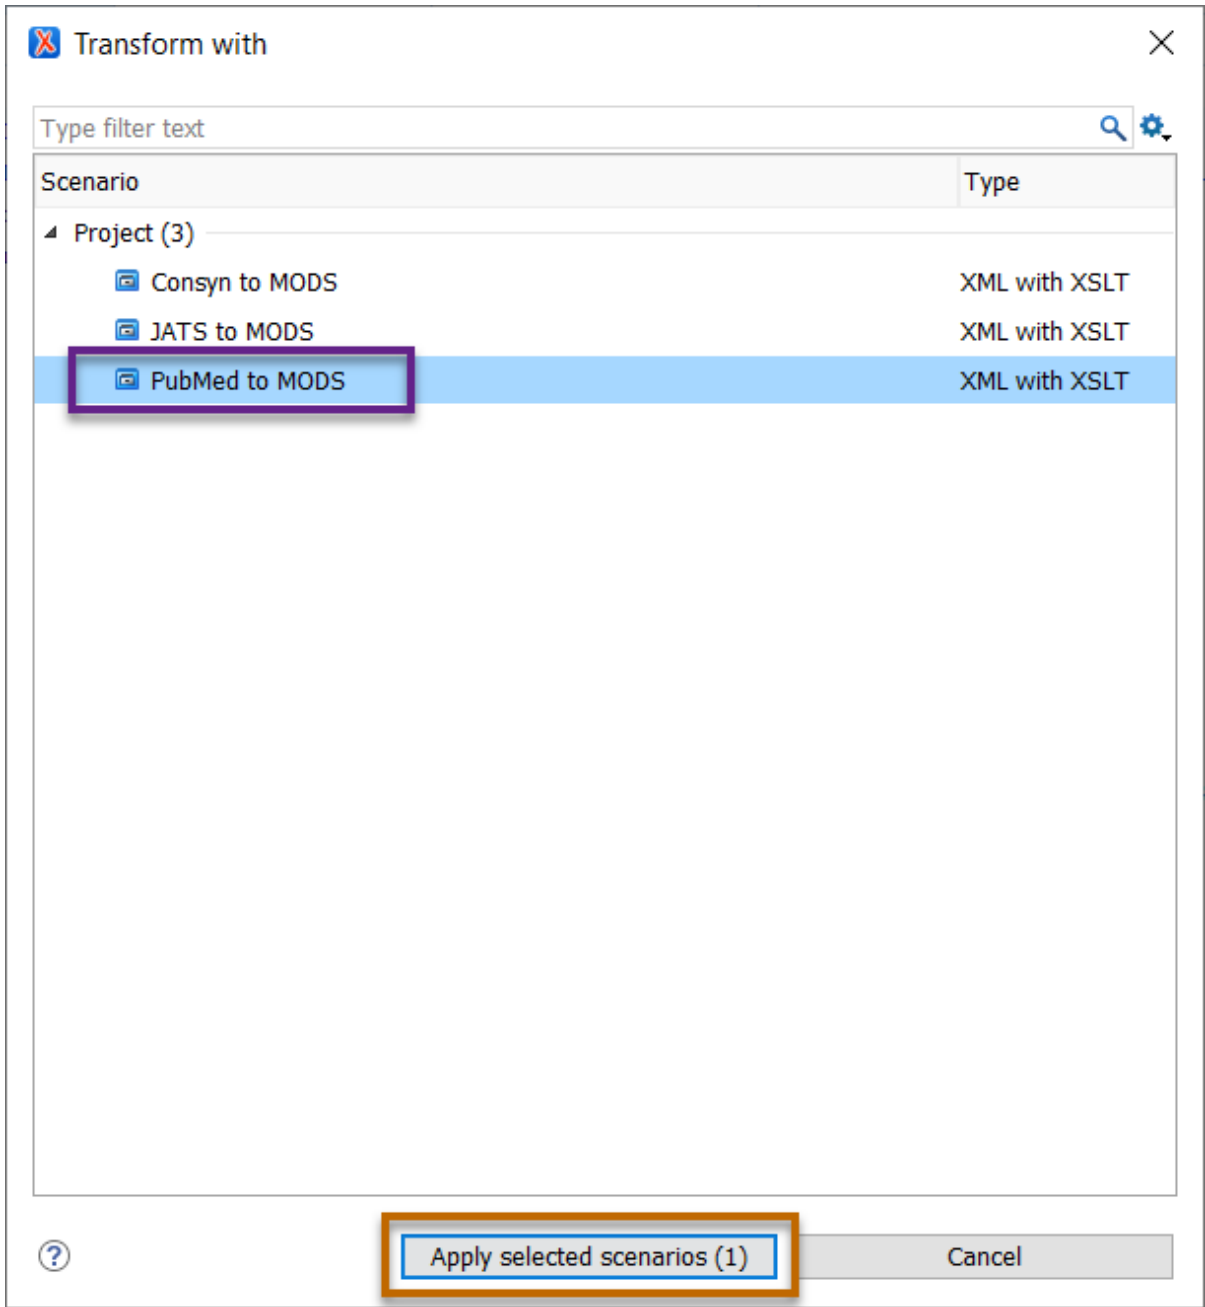

- 1. In the **Project Pane**, make sure the folder with the XML files to be transformed is open.
- 2. Click the *first* file, then **hold shift** and click the *last* file.

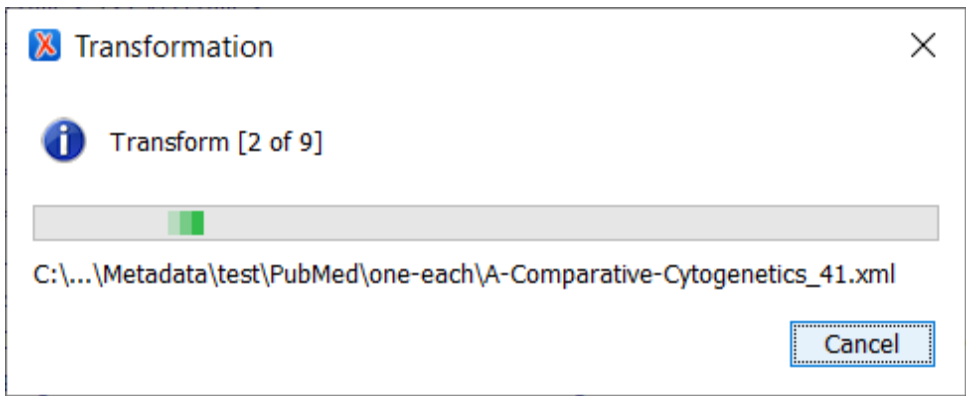

- 3. **Right-click** the selected files and select **Transform -> Transform with..**

4. Select the appropriate Transformation Scenario and then click **Apply selected scenarios**

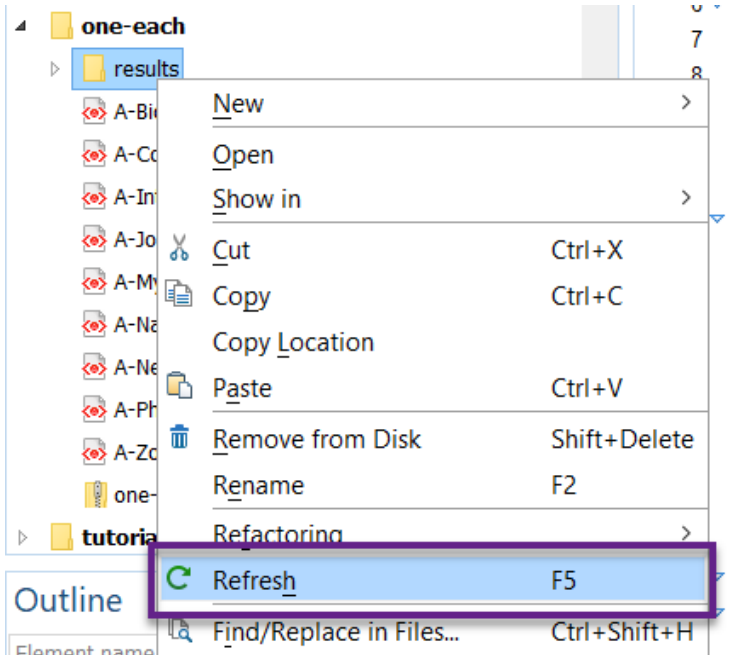

5. A box will pop up showing the progress of the transformation

6. When complete, the status bar at the bottom of the window will say Transformation successful or the Transformation Problems view will appear with a list of errors (it's possible for only some of the files to transform.)

7. **Refresh** the folder in the **Project Pane** to make sure all of your files will show up.

8. Congrats! All of your files are transformed!
